ABT-MSE Operating model fitting report

Tom Carruthers

September 20, 2016

Operating model scenario is

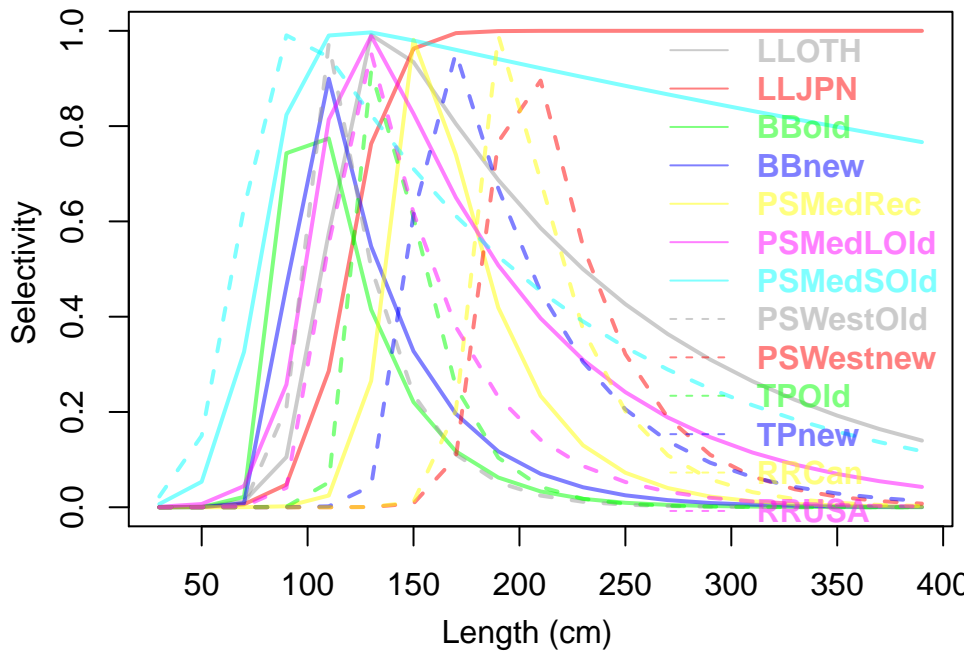

Level 1: High natural mortality and younger age of maturity for the Eastern stock, Low natural mortality and older age at maturity for the Western stock

Level 1: Steepness of the Beverton Holt Stock recruitment relationship for both stocks assumed to be 0.7

Level 1: Master abundance index calculated including Spanish CPUE data

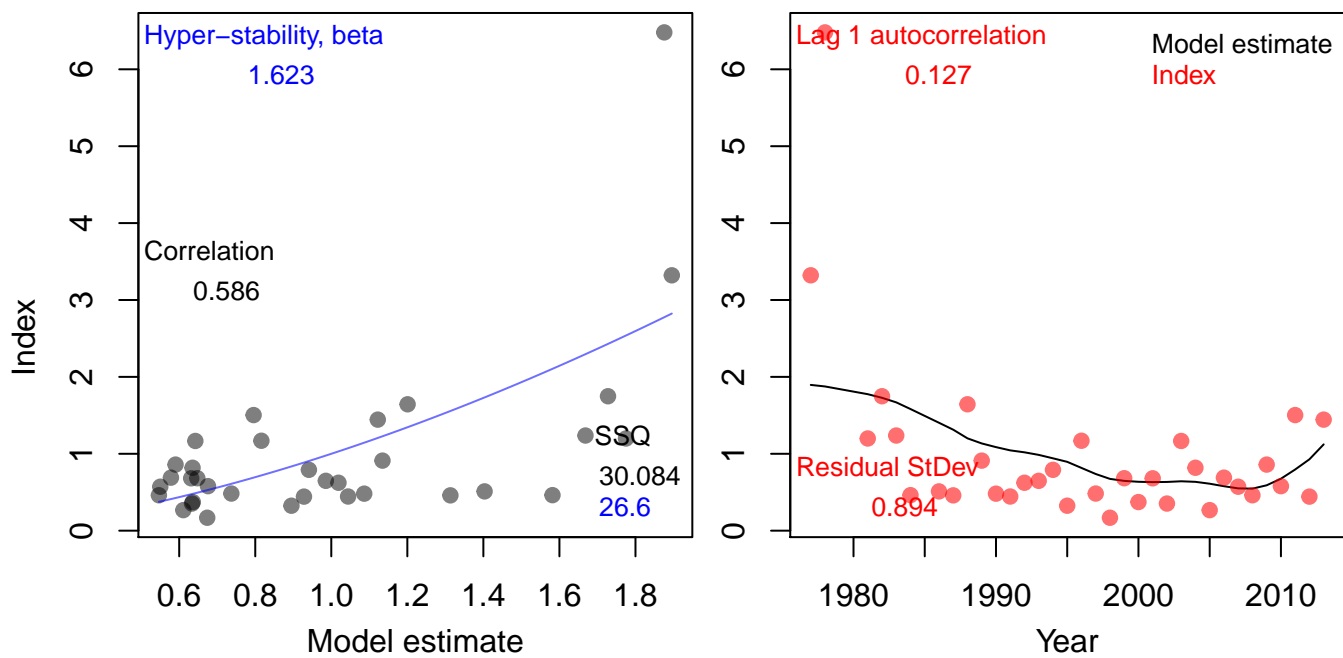

Level 1: Depletion of both stocks as inferred by the unmodified master index

Estimated selectivities
