

7 / 24 : 1 1 2 1 : 1 1 2 1

ABT-MSE Operating model fitting report

Tom Carruthers

September 14, 2016

Operating model scenario is

Level 1: High natural mortality and younger age of maturity for the Eastern stock, Low natural mortality and older age at maturity for the Western stock

Level 1: Steepness of the Beverton Holt Stock recruitment relationship for both stocks assumed to be 0.7

Level 2: Master abundance index calculated excluding Spanish CPUE data

Level 1: Depletion of both stocks as inferred by the unmodified master index

Estimated selectivities

Words with markup to indicated `code` or R `function` names.

Some R:

```
OMI@Name # objects in memory and current namespace
```

```
## [1] "7 / 24 : 1 1 2 1 : 1 1 2 1"
```

Now some MSE results:

```
print(Sys.time())
```

```
## [1] "2016-09-14 10:11:57 PDT"
```

Fit to observed catches

Predicted (line) versus observed (point) catches of Atlantic bluefin (log tonnes)
